**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 4, 7, 9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Yeo et al (6,521,939). The reference to Yeo teaches the basic structure of the claimed invention, for example in FIGS. 9-13, including multiple implant regions (104) formed in a well of the same conductivity type (100), and connected to a common bias voltage control terminal (112). In addition, first and second gates (108) are disposed symmetrically around the control terminal as shown in FIGS. 9 and 12. See also the discussion at col. 5, l.64, and col. 6, l. 33 where Yeo teaches that the implant regions may be of the same conductivity type as the well region, and that all of the gate regions are connected to the bias voltage control terminal. Yeo also teaches that the gates may be formed of polysilicon in col. 5, l. 34.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5, 6, 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yeo et al. While Yeo doesn't explicitly teach that the substrate may be contacted by an implant region located on the top surface, Yeo does contact the substrate to ground, as claimed, and this feature is commonly employed, and would be obvious to one skilled in the art.
